

Peano 算术 (3)

Lemma (非负整数满足加法消去律) 设 $(N, 0, s)$ 满足 Peano 公理, 则有:

对 $\forall x, y, z \in N$, 若 $x+z = y+z$, 则有 $x=y$.

Proof: 令 $I = \{z \in N \mid \text{对 } \forall x, y \in N, \text{ 若 } x+z = y+z, \text{ 则有 } x=y\}$ $\therefore I \subseteq N$.

$0 \in N$, 对 $\forall x, y \in N$, 若 $x+0 = y+0$, 则有:

$$\therefore x+0 = x, y+0 = y \quad \therefore x = x+0 = y+0 = y \quad \therefore 0 \in I$$

$\therefore I$ 是 N 的包含 0 的子集.

对 $\forall z \in N$, 若 $z \in I$, 则有:

$\therefore z \in N \quad \therefore s(z) \in N$. 对 $\forall x, y \in N$, 若 $x+s(z) = y+s(z)$, 则有:

$$\text{~~z} \in I~~ \quad \therefore x+s(z) = s(x+z), y+s(z) = s(y+z)$$

$$\therefore s(x+z) = x+s(z) = y+s(z) = s(y+z)$$

$\therefore$ 映射 $s: N \rightarrow N$ 是单射

$$\therefore x+z = y+z.$$

$$\therefore z \in I, x, y \in N, x+z = y+z \quad \therefore x=y \quad \therefore s(z) \in I$$

$$\therefore I = N$$

$\therefore$ 对 $\forall x, y, z \in N$, 若 $x+z = y+z$, 则有:

$$\therefore z \in N \quad \therefore z \in N = I$$

$$\therefore z \in I, x, y \in N, x+z = y+z \quad \therefore x=y$$

Lemma (任一非负整数不等于它的后继) 设 $(N, 0, s)$ 满足 Peano 公理, 则有:

对 $\forall x \in N$, 有: $x \neq s(x)$

Proof: 令 $I = \{x \in N \mid x \neq s(x)\}$ $\therefore I \subseteq N$

$\therefore 0 \in N$ 且 $0 \neq s(0)$ $\therefore 0 \in I$ $\therefore I$ 是 N 的包含 0 的子集.

对 $\forall x \in N$, 若 $x \in I$, 则有:

$\therefore x \in N$ $\therefore s(x) \in N$ $\therefore x \in I$ $\therefore x \neq s(x)$.

假设 $s(x) = s(s(x))$, 则 $\therefore s: N \rightarrow N$ 是单射 $\therefore x = s(x)$ 矛盾.

$\therefore s(x) \neq s(s(x))$ $\therefore s(x) \in I$ $\therefore I = N$

$\therefore$ 对 $\forall x \in N$, 有: $x \in N = I$ $\therefore x \neq s(x)$ $\square$

Lemma: 设 $(N, 0, s)$ 满足 Peano 公理, $x \in N$ 且 $x \neq 0$, 则存在唯一的 $y \in N$ 使得 $x \neq y$ 且 $x = s(y)$.

Proof: 存在性在 重 A.1 - Peano 算术 (1) 笔记 中已经证明过. 下证唯一性.

假设存在 $y_1 \in N$, $y_2 \in N$, 使得:

$$x \neq y_1 \text{ 且 } x = s(y_1)$$

$$x \neq y_2 \text{ 且 } x = s(y_2)$$

同时成立, 则有: $s(y_1) = x = s(y_2)$

$\therefore s: N \rightarrow N$ 是单射 $\therefore y_1 = y_2$ $\therefore$ 唯一性得证. $\square$

Lemma (1 = s(0) 是非负整数的乘法幺元) 设 $(N, 0, s)$ 满足 Peano 公理, 则有:

$$\text{对 } \forall x \in N, \text{ 有: } x \cdot 1 = x = 1 \cdot x$$

$$\text{Proof: 对 } \forall x \in N, \text{ 有: } x \cdot 1 = x \cdot s(0) = x \cdot 0 + x = 0 + x = x$$

$\therefore$ 左边的等号得证.

$$\text{令 } I = \{x \in N \mid x = 1 \cdot x\} \quad \therefore I \subseteq N$$

$$0 \in N, \text{ 且有: } 1 \cdot 0 = 0 \quad \therefore 0 = 1 \cdot 0 \quad \therefore 0 \in I \quad \therefore I \text{ 是 } N \text{ 的包含 } 0 \text{ 的子集}$$

对 $\forall x \in N$, 若 $x \in I$, 则有:

$$\therefore x \in N \quad \therefore s(x) \in N \quad \therefore x \in I \quad \therefore x = 1 \cdot x$$

$$\therefore s(x) = \cancel{s(1 \cdot x)} \quad s(x+0) = x + s(0) = x + 1 = (1 \cdot x) + 1 = 1 \cdot s(x)$$

$$\therefore s(x) \in I \quad \therefore I = N$$

$$\therefore \text{对 } \forall x \in N, \text{ 有: } x \in N = I \quad \therefore x = 1 \cdot x \quad \therefore \text{右边的等号得证.} \quad \square$$

Lemma (非负整数满足乘法右分配律) 设 $(N, 0, s)$ 满足 Peano 公理, 则有:

$$\text{对 } \forall x, y, z \in N, \text{ 有: } (x+y)z = xz + yz$$

$$\text{Proof: 令 } I = \{z \in N \mid \text{对 } \forall x, y \in N, \text{ 有: } (x+y)z = xz + yz\} \quad \therefore I \subseteq N$$

$$0 \in N, \text{ 且对 } \forall x, y \in N, \text{ 有: } (x+y) \cdot 0 = 0, \quad x \cdot 0 + y \cdot 0 = 0 + 0 = 0$$

$$\therefore (x+y) \cdot 0 = x \cdot 0 + y \cdot 0 \quad \therefore 0 \in I \quad \therefore I \text{ 是 } N \text{ 的包含 } 0 \text{ 的子集}$$

对 $\forall z \in N$, 若 $z \in I$, 则有:

$$\therefore z \in N \quad \therefore s(z) \in N \quad \text{对 } \forall x, y \in N, \text{ 有:}$$

$$\therefore z \in I \quad \therefore (x+y)z = xz + yz$$

$$\therefore (x+y) \cdot s(z) = (x+y) \cdot z + (x+y) = (xz + yz) + (x+y) = xz + (yz + (x+y))$$

$$= xz + ((yz + x) + y) = xz + ((x + yz) + y) = xz + (x + (yz + y))$$

$$= (xz + x) + (yz + y) = x \cdot s(z) + y \cdot s(z)$$

$$\therefore s(z) \in I$$

$$\therefore I = N$$

$\therefore$ 对 $\forall x, y, z \in N$, 有:

$$\therefore z \in N \quad \therefore z \in N = I \quad \therefore (x+y)z = xz + yz \quad \square$$

Lemma (非负整数集中, 加法零元 0 的乘法性质) 设 $(N, 0, s)$ 满足 Peano 公理,

则有: 对 $\forall x \in N$, 有: $x \cdot 0 = 0 = 0 \cdot x$

Proof: 对 $\forall x \in N$, $x \cdot 0 = 0$ 根据乘法的定义显然成立. $\therefore$ 左边的等号成立.

$$\text{令 } I = \{x \in N \mid 0 = 0 \cdot x\} \quad \therefore I \subseteq N$$

$0 \in N$, 且有: $0 \cdot 0 = 0 \quad \therefore 0 = 0 \cdot 0 \quad \therefore 0 \in I \quad \therefore I$ 是 N 的包含 0 的子集.

对 $\forall x \in N$, 若 $x \in I$, 则有:

$$\therefore x \in N \quad \therefore s(x) \in N \quad \therefore x \in I \quad \therefore 0 = 0 \cdot x$$

$$\therefore 0 \cdot s(x) = 0 \cdot x + 0 = 0 + 0 = 0 \quad \therefore 0 = 0 \cdot s(x)$$

$$\therefore s(x) \in I \quad \therefore I = N$$

$\therefore$ 对 $\forall x \in N$, 有: $x \in N = I \quad \therefore 0 = 0 \cdot x \quad \therefore$ 右边的等号得证. $\square$

Lemma (非负整数满足乘法交换律) 设 $(N, 0, s)$ 满足 Peano 公理, 则有:

对 $\forall x, y \in N$, 有: $xy = yx$

Proof: 令 $I = \{x \in N \mid \text{对 } \forall y \in N, \text{有: } xy = yx\}$ $\therefore I \subseteq N$.

$\therefore 0 \in N$, 且对 $\forall y \in N$, 有: $0 \cdot y = 0 = y \cdot 0 \therefore 0 \in I$

$\therefore I$ 是 N 的包含 0 的子集.

对 $\forall x \in N$, 若 $x \in I$, 则有:

$\therefore x \in N \therefore s(x) \in N$. 对 $\forall y \in N$, 有:

$\therefore x \in I \therefore xy = yx$

$\therefore y \cdot s(x) = y \cdot x + y = xy + y = x \cdot y + 1 \cdot y = (x+1) \cdot y = (x+s(0)) \cdot y$
 $= s(x+0) \cdot y = s(x) \cdot y$

$\therefore s(x) \cdot y = y \cdot s(x) \therefore s(x) \in I \therefore I = N$

$\therefore$ 对 $\forall x, y \in N$, 有:

$\therefore x \in N \therefore x \in N = I \therefore xy = yx$ $\square$
